

## IBUTILIDE

<b>Form:</b>	0.1mg/ml 10ml ampoule (1mg) (Corvert™)
<b>Reconstitution:</b>	Already in solution Can be diluted if required
<b>Administration:</b>	a) IV infusion over 10 minutes  b) Second 10 minute infusion of equal strength may be administered if the arrhythmia does not terminate within 10 minutes.
<b>Method:</b>	May be administered undiluted or diluted in 50ml diluent.  Diluted solutions may be stored for 24 hours under refrigeration.
<b>Compatibility &amp; Stability:</b>	Glucose 5%  Sodium chloride 0.9%
<b>Special Notes:</b>	1. Observe patients with continuous ECG monitoring during infusion and for at least 4 hours after, or until QT <sub>c</sub> has returned to baseline.  2. Doses in addition to the second infusion are not recommended because of the risk of adverse events associated with QT interval prolongation.
