

ZOLEDRONIC ACID

- Form:** 4mg per 5ml vial
(Zometa™)
- Reconstitution:** Already in solution.
- Administration:** a) IV Infusion
- Method:** Withdraw requisite dose and add to 100ml of appropriate infusion fluid.
Infuse over at least 15 minutes.
Administer as a single IV infusion in a separate infusion line.
- Compatibility & Stability:** Glucose 5%
Sodium Chloride 0.9%
- Zometa™ solution is stable for 24 hours if refrigerated, after further dilution with 100ml of a suitable diluent. Allow the refrigerated solution to reach room temperature before administration.
- Special Notes:**
1. Do not mix with calcium or other divalent cation containing infusion solutions such as lactated Ringer's.
 2. Ensure that the patient is adequately hydrated.
